Vim presentation

Dylan Pang

7 August 2020

Why vim?

- ▶ It is **lightweight** (Compared to IDEs/Modern text editors)
- Multi-mode text editting means that the shortcuts are easy to hit and remember, NO MORE CTRL!
- Heavily extensible with plugins and personalised configs
- Completely keyboard driven
- ► Pre-installed on all unix systems

Modes

Look at the bottom left of your screen

- Normal mode: Default mode for you to input commands and move around (Hit 'Esc' in the other 2 modes)
- 2. Insert mode: Mode for you to type (Hit 'i' in normal mode)
- Visual mode: Used for selecting portions of text for manipulation (Hit 'v' in normal mode)

cd ~
wget https://raw.githubusercontent.com/dylanpjx/unix_workshop/master/demo.txt

Default .vimrc

```
cd ~
wget https://raw.githubusercontent.com/dylanpjx/unix_workshop/master/.vimrc
```

Movement

In normal mode

- 1. gg = > top of page (!!)
- 2. G => bottom of page (!!)
- 3. 0 = >start of sentence
- 4. \$ = > end of sentence
- 5. w = jump from word to word (!!)
- 6. b = jump from word to word **b** (!!)
- 7. e => jump from end of word to end of word
- 8. / or ? => forward or backward search (!!)
- 9. f or t = find first occurrence of character, dte (!!)
- 10. zt, zz, zb => scroll to top, middle, bottom (!!)
- 11. hjkl => HIGHLY UNRECOMMENDED (AND NO ARROW KEYS AS WELL)

Editting (Stay in normal)

In normal mode

- 1. y = yank (Copy), yy or Y to yank sentence
- 2. d => delete (Cut), dd to cut sentence, D to cut after your cursor
- 3. x => Same as d but for one character only
- 4. p => paste after cursor, P to paste before cursor
- 5. r => replace character on cursor

Editting (Jumps to insert, ie. can continue typing)

- 1. a => append, A to append at the end of the sentence (!!)
- 2. s => substitute, S to sub everything after your cursor
- 3. c => change (Delete and continue typing), cc to change sentence, C to change after your cursor
- 4. o => open new line, 0 opens a new line before the current line

How it works?

```
 \begin{tabular}{ll} {\mbox{Operator}} $ \{\mbox{Count}\} $ \{\mbox{Motion}\} $ \\ \mbox{Eg. d 5 $w=$} & \mbox{delete 5 words from cursor Eg. y 5 $j=$} \\ \mbox{yank 5 lines down} \\ \mbox{} \mbo
```

Exitting vim

- 1.: wq or ZZ => save and quit
- 2. :q! or ZQ => quit without saving

Advanced features

- ▶ :tabe {file} => open in new tab
- ▶ :vsp {file} => open a split vertically
- :sp {file} => open a split horizontally
- :%s/{foo}/{bar}/g => looks through the entire file and substitutes foo for bar (Google search and replace vim)
- :r !{cmd} => puts output of \$cmd into the current file

Popular vim plugins (Don't use until you are comfortable with base vim)

Plugin manager: Vim plugged

- easymotion
- coc.nvim
- goyo
- ▶ indentLine
- vim surround
- autopair
- NerdTree/Ctrl-P/netrw
